

# Recycled Rubber Tiles

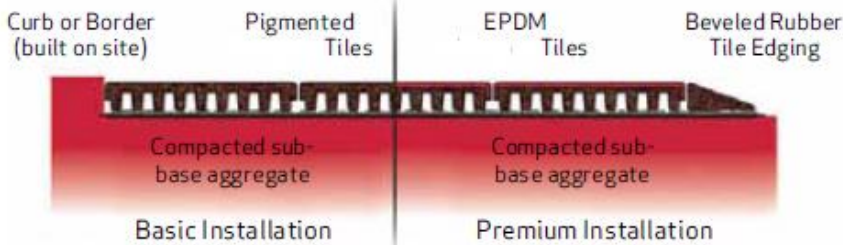

Interlocking tiles are available in your choice of pigmented rubber top or EPDM top. Rubber tiles offer superior shock absorption, low maintenance, long wear, and accessibility. They are also perfect for indoor applications in addition to outdoor since there is no on site mixing required.

Our Interlocking Tile utilizes a patent pending, locking edge to reduce lateral shift, corner lift, and strain on tiles. Brightly colored EPDM topped tiles are also available, which offer a broader range of colors and increased durability.

## Basic Specifications

- Solid colors and multi-colored tiles
- Various thicknesses for your playground's fall height
- Sub-base should be concrete, asphalt, or compacted aggregate with suitable drainage

## Tile Installation Detail

### Pigmented Rubber Colors

### EPDM Colors

EPDM tile can be ordered in a variety of color combinations with a maximum of 90% color and a minimum of 10% black. Colors are approximate and may vary.
